

IL VIROMA UMANO

Dove si nascondono i virus?

I virus popolano ogni angolo del corpo umano. Qui è mostrata una piccola varietà di virus a RNA e a DNA, alcuni dei quali possono causare malattie negli esseri umani. Certi virus preferiscono una sede, altri invece si diffondono.

● Provoca malattie negli umani
Acido nucleico:
R RNA
D DNA

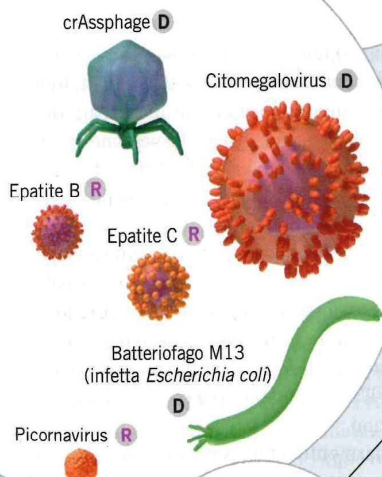

Bocca

Latte materno

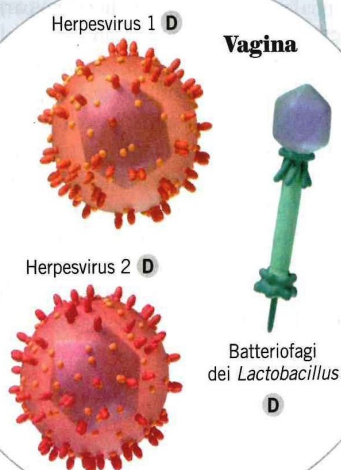

Tratto intestinale

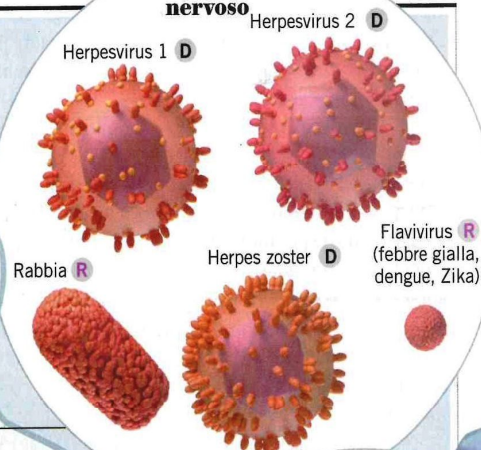

Vie urinarie

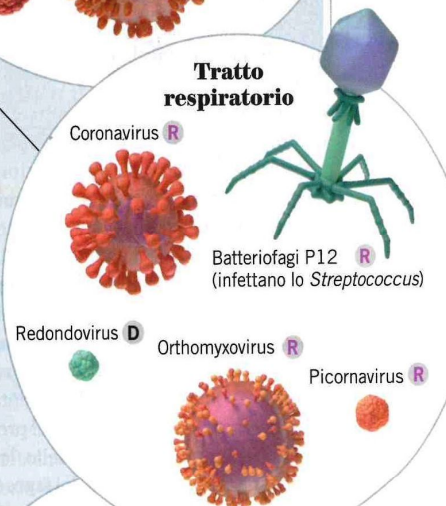

Vagina

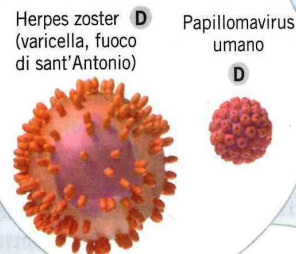

Sistema nervoso

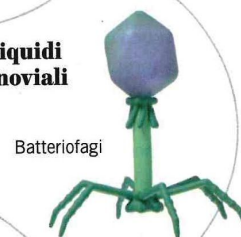

Tratto respiratorio

Epidermide

Liquidi sinoviali

Sangue
